

2 AAA in IoT Environment

Aim

To configure Authentication, Authorization and Accounting (AAA) using local and server-based methods in a IoT environment using packet tracer

Procedure

1. Open Packet tracer and create an IoT network
2. Add a router, server and IoT devices
3. Configure IP address of all devices
4. Enable AAA on the router
5. Create a local username and password

6. Test user login and access Permissions

Result

Thus, AAA was successfully configured using both local authentication and server-based authentication in a IoT network environment.
