

Multimedia Network for Audio and video streaming

Aim.

To design and simulate a multimedia network capable of streaming audio and video to multiple devices simultaneously

~~Modules~~

Procedure

1. ~~Open~~ Cisco Packet Tracer
2. Add a Router, switch, server and multiple PCs
3. connect all devices using suitable cables
4. Assign IP address to the server and client devices
5. configure the server for multimedia services
6. check connectivity using the ping command
7. Allow multiple client devices to access the server

8. verify simultaneous data transmission
