

h. Basic network using three PCs and two switches

Aim

To create a network where three PCs communicate with each other through two switches

devices required

- 3 PCs
- 2 switches
- copper straight-through cables

Procedure

1. Add three PCs and two switches in Packet Tracer
2. Connect the PCs to the switches
3. connect both switches together
4. Assign IP address to all PCs
5. use the Ping command to test connectivity

Result

Thus, basic network using three PCs and two switches was successfully configured and communication between all devices was verified.
